

CLINICAL PROGRAMMING BOOTCAMP · SAMPLE ARTIFACT

Sample Case Report Form

and Annotated CRF (aCRF)

Study ABC-01

A Phase 2, Randomized, Double-Blind Study of Drug A vs Placebo

What's inside

PART 1 — Blank CRF

The forms as a site sees them: Demographics, Vital Signs, Study Drug, Adverse Events, Concomitant Meds, Laboratory, Disposition.

PART 2 — Annotated CRF (aCRF)

The same forms marked up in orange with the SDTM variable each field maps to.

The annotated CRF is a real submission deliverable: it ships alongside the datasets and Define-XML so a reviewer can trace any SDTM variable back to the exact question that collected it. Annotations here match `data/mapping_specification.md`.

SYNTHETIC TRAINING ARTIFACT

All data, subjects, sites and products are fictional. This form illustrates layout conventions common to modern EDC systems; it is not affiliated with, endorsed by, or a reproduction of any vendor's product. Do not use for an actual clinical trial.

PART 1

Blank CRF

The seven forms as a site would see them in the EDC system. These are the questions that generate every raw dataset you work with: dm_raw, vs_raw, ex_raw, ae_raw, cm_raw, lb_raw and ds_raw. Read them the way a coordinator would — then look at Part 2 to see where each answer lands in SDTM.

For reference — these dates are captured on the Demographics form at enrolment.

PART 2

Annotated CRF (aCRF)

The same seven forms, annotated in orange with the SDTM variable each field maps to. This is a real submission deliverable: it ships with the datasets and Define-XML so a reviewer can trace any SDTM value back to the exact question that collected it. Annotations match `data/mapping_specification.md`.

Record after the subject has been seated and at rest for at least 5 minutes.

Date of assessment

DD-MMM-YYYY

VS.VSDTC → derive VS.VSDY

MEASUREMENTS

Each row below becomes ONE ROW in SDTM VS (VSTESTCD / VSTEST / VSORRES / VSORRESU) — the wide-to-tall transpose.

Systolic blood pressure		mmHg	VSTESTCD = SYSBP
Diastolic blood pressure		mmHg	VSTESTCD = DIABP
Pulse rate		beats/min	VSTESTCD = PULSE
Temperature		C	VSTESTCD = TEMP
Height (screening only)		cm	VSTESTCD = HEIGHT
Weight		kg	VSTESTCD = WEIGHT

NOT DONE

Were any assessments not performed?

☐ Yes — specify below
[Y]

☐ No
[N]

→ VS.VSSTAT / VSREASND

Blank rows are NOT zero — an unmeasured value stays null in SDTM

CODING NOTE

AETERM keeps the verbatim text exactly as written. AEDECOD is derived later by coding that verbatim term against MedDRA — it is never typed on the CRF.

Leave the end date blank if the event is ongoing at the time of reporting.

A blank end date = ongoing → AEENDTC stays NULL

4								
5								
6								
7								
8								

Frequency codes: QD = once daily BID = twice daily TID = three times daily PRN = as needed

Leave the end date blank if the medication is ongoing.

NOTE THE RENAME: the CRF field 'Freq' maps to SDTM CMDOSFRQ, not CMFREQ. Medications starting before first dose give a NEGATIVE CMSTDY.

CMDECOD is derived by coding against WHODrug — not typed on the CRF

LBCAT is assigned from the section heading (HEMATOLOGY / CHEMISTRY). LBNRIND is DERIVED by comparing the result to the reference range — it is not collected. Note CDISC CT names 'White blood cells' as LBTEST = Leukocytes (LBTESTCD = WBC).

Results already tall — no transpose needed, unlike Vital Signs

PROTOCOL MILESTONES

For reference — these dates are captured on the Demographics form at enrolment.

Informed consent and randomization each become their OWN DS record with DSCAT = PROTOCOL MILESTONE (DSDECOD = INFORMED CONSENT OBTAINED / RANDOMIZED). So the consent date appears in BOTH DM.RFICDTC and DS — that is expected, not a duplicate.
